

The order process at BHM

Please note the following points when ordering a pair of hearing glasses. For a functioning pair of hearing glasses, you will need:

1. Temples: monaural (left or right side active + dummy device) or binaural (both sides active), colour: brown or black
2. Frame fronts
3. Extension tips

To select the correct temples, please take a look at the data sheets for the AN-Evo1 and the contact star ev01.

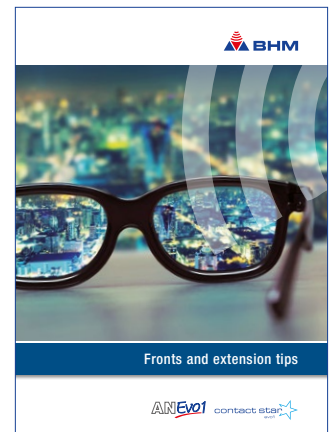

To order accessories, please observe the following:

Firstly, please select the appropriate front part (frame front) according to the criteria below:

- The front part should span the width of the head by the ears, so that the temples are virtually at a right angle to the front part.
- The bridge of the front part should rest fully on the nose, but not squeeze.
- As the front part of the glasses must apply the necessary contact pressure, we recommend using BHM frame fronts and BHM extension tips, as these have the appropriate stability.

Select a suitable front from the folder „Fronts and extension tips“ and chose your desired size and colour using the item numbers.

Example: For the front „Nikolai“ in size 57/20, silver, place an order for item number 77733168.

Model „Nikolai“

Size	Measurement		Article Number					
	B	C	Gold	Silver	Black	Grey	Red	Blue
55 / 20	55 mm	20 mm	77733170	77733171	77733172	77734784	77734785	77734783
57 / 20	57 mm	20 mm	77733167	77733168	77733169	77734787	77734788	77734786
59 / 20	59 mm	20 mm	77733381	77733382	77733383			

To determine the correct temple length, and for the first fitting, we recommend using the adjustment aid BHM-MA1.

With the aid of measuring adapter MA1 (item number 77733215), you can calculate the correct size of the extension tip. Once again, it is important to enter your desired size and colour using the item number.

Example: For extension tips in size 3, gold, place an order for item number 77733184

made of metal: Nikolai, Josephine, Sportivo, Lars, Celine, Frances
