

AN-Evo1 and contact star evo1 are excellent alternatives to costly middle ear implants involving risky surgical intervention. contact star evo1 is the first bone conduction hearing system for glasses with improved speech intelligibility thanks to the automatic identification of sound environments in the form of Sound Dynamix (BHM Automatic). In addition, each device can be individually adjusted to the wearer by means of in-situ audiometry. It is also available as a CROS system on request.

Hearing systems
made in Austria

Bone conduction hearing glasses

Bone conduction hearing glasses are a vision aid and a hearing device in one, as the glasses temple sends vibrations to the inner ear. BHM bone conduction glasses are notable for their high level of comfort, as well as their reliability, technical innovation and excellent hearing experience – tailored precisely to the needs of each wearer. BHM also offers a wide range of fashionable fronts and extension tips.

contactmini

contact mini – no surgical risk

Our small contact mini is a key addition to BHM's portfolio of bone conduction hearing devices made especially with children in mind. contact mini was developed specifically for children suffering from mild to moderate hearing impairment. The hearing system consists of two interconnected units, an electronic casing and a tiny miniature receiver that can be discreetly attached to various different items of headwear, hair bands or headgear. As a result, children will enjoy full freedom of movement and be able to orient themselves in the world without any trouble.

More and more adults are discovering the advantages of contact mini too. For sports enthusiasts in particular, contact mini is a practical companion, for example when jogging or skiing, as it can be added easily to caps or helmets, among other items.

pan

pan – hear better with glasses

pan is an aesthetic system, capturing sound via two directional microphones as a BTE (behind-the-ear) module and transferring it into the ear by means of a small speaker – all this, plus easy integration into any pair of glasses.

In short, our experts have created an innovative product whose high-tech directional microphone system provides clear and interference-free sound, thus setting completely new standards for relaxed, intelligible hearing. For unilateral hearing loss or severe hearing impairment, the pan-CROS or BiCROS is also available for safe and secure sound transfer.

apollon

apollon – the world's most powerful hearing system!

apollon is a modern, high-performance hearing device that meets a broad range of requirements and is suitable for both – bone conduction and air conduction.

Thanks to its deliberately simple handling, it is perfect for those in need of care or those with limited mobility. apollon also wins fans as a practical pocket hearing device. Its compact size means that it is a reliable companion in any hearing situation.

Viper 170P

The human ear hears “analogue” – so why not your hearing device?

Modern technology and easy handling: the analogue Power-BTE facilitates an unlimited sound experience whilst also guaranteeing all-round hearing comfort.
